MOVE TO LAST/NEXT MARKER:	Ctrl + ? or ?	MOVE ONE PIXEL L or R:	Alt + ? or ?
JOG L or R:	F3/F9	SPLIT EVENT AT CURSOR:	S

### Cursor indications

The cursor changes depending on which functions are available.

Cursor	Indicates	Modifier	Description
	Standard	none	This is the standard arrow cursor that means events can be dragged.
	Trim	none	Position the cursor over the edge of an event and drag to trim the event shorter or longer.
	Slip Trim	Alt	Position the cursor over the edge of an event, press Alt, and drag to trim. The media within the event moves with the edge. This is useful to preserve the beginning or end of an event while trimming.
	Stretch	Ctrl	Position the cursor over the edge of an event, press Ctrl, and drag the edge to stretch or compress it. This makes the media in the event play slower or faster.
	Slip	Alt	Press Alt and drag on the middle of a clip to move the media within the event without moving the event itself.
	Trim Adjacent	Ctrl+Alt	Position the cursor over the boundary between two adjacent events, press Ctrl+Alt, and drag. Both events are edge trimmed simultaneously.
	Slide	Ctrl+Alt	Position the cursor over the middle of an event, press Ctrl+Alt, and drag to simultaneously trim both ends.
	Slide Crossfade	Ctrl+Alt	Position cursor over a crossfade, press Ctrl+Alt, and drag on a crossfade to move it.

## SELECTIONS

EVENT:	2 x R. Click	NON-ADJACENT EVENTS:	Ctrl + Click
SELECT RANGE OF EVENTS:	Shift+Click first & last	SELECT ALL TRACKS AND EVENTS:	Ctrl + A
SELECT TRACK:	R.Cl	SELECT SEVERAL TRACKS:	Shift + Click
